*Zip easily on and off*

**Heating elements front**  
*Placed over the knees.*

**Form fitted knees**  
*Ensures moveability.*

**Elastic cuffs**  
*Avoids dragging.*

# BEFORE USE

Congratulations on your new Heat Experience Heated Pants. Before you start using them, there are some things you should know.

1

The battery should be fully charged before first use, or after a long period (2 months or more) of no use.

Charge the battery by connect it to the supplied charger. When the red light is lit, charging is ongoing.

Charging takes about 4 hours, When charging is complete, the red light turns off, and a green light turns on.

The heated pants has three different heating levels. We recommend that you get to know how the product work before you head out on longer lasting adventures.

# QUICK TIPS!

How to get the most out of your pants!

EN

2

The Heat Experience Heated pants are primarily designed as a mid layer piece, but would also work as a pullover piece in dry weather. The all-way zippers allows for easy use.

Worn with a moisture wicking base layer, such as a light wool sweater, and a wind/rainproof outerlayer give you a very flexible and comfortable setup for a warm experience.

We recommend that you turn on the heat before you feel cold, as a preventative measure. If you first get very cold, the body requires a lot of energy to regain heat.

For best effect; Turn on high for a short time, and adjust down when you feel the heat, further on, adjust heat when needed.

# USE

## Getting started

3

Open the zipper on the battery pocket, placed on the inside of the pocket. Connect the battery to the cable before inserting it into the pocket. Close the pocket zipper.

Press and hold the button for ~4 seconds, until the light turns on. The pant is now heating up, and the red light should be blinking slowly.

This process takes about 5 minutes. you can press the button once more to go directly in to one of the modes, this will however reduce the "heat boost effect".

# USE AND CARE

*some tips for optimal durability and comfort.*

**4**

Remember to remove battery before washing, and follow the instructions carefully, to ensure maximum lifespan of your heated vest.

A spare battery is a good idea if you use your product for longer times, remember to keep the extra battery at a temperature as close to room temperature as possible. A cold battery will have a reduced output.

The product is designed to work in conditions from 10 degrees to -20 degrees (Celsius). (if used as a layering piece).

-20 to 10°C

# HEATING LEVELS

EN

Level	Temperature*	Indicator light	Duration*
I	45°C/113°F	Blue	7 hours
II	50°C/122°F	White	5 hours
III	55°C/131°F	Red	3,5 hours

\*The duration and given temperature will vary depending on ambient temperature and conditions.  
Time is calculated with 4400mAh 7,4V battery.

## CERTIFICATIONS

# CAUTION

Keep out of high temperatures. The built-in polymer lithium battery may explode or be damaged if exposed of high temperatures or fire.

Do not charge unattended, use only original charger.

Battery may explode if disposed of in fire.

Do not crush or disassemble.

All components should be recycled in according to local laws and regulations.

Keep the heated gloves away from children.

Should not be used by users unable to feel changes in temperature.
